

Figure S3. Photosynthetically active radiation by time and lake. Measurements of photosynthetically active radiation collected just below the surface of the water prior to each RNA collection event guided our decision to categorize samples collected at 9:00, 13:00, and 17:00 as "day" and samples collected at 21:00, 5:00, and 1:00 as "night". Sunrise and sunset times for each lake are reported in Table 1.
